

Create an Admin Dashboard

Create an Admin Dashboard plugin that will sit directly on a web hosting CPanel like Bluehost, etc.

Users will login to the Admin Dashboard plugin through a specific URL.

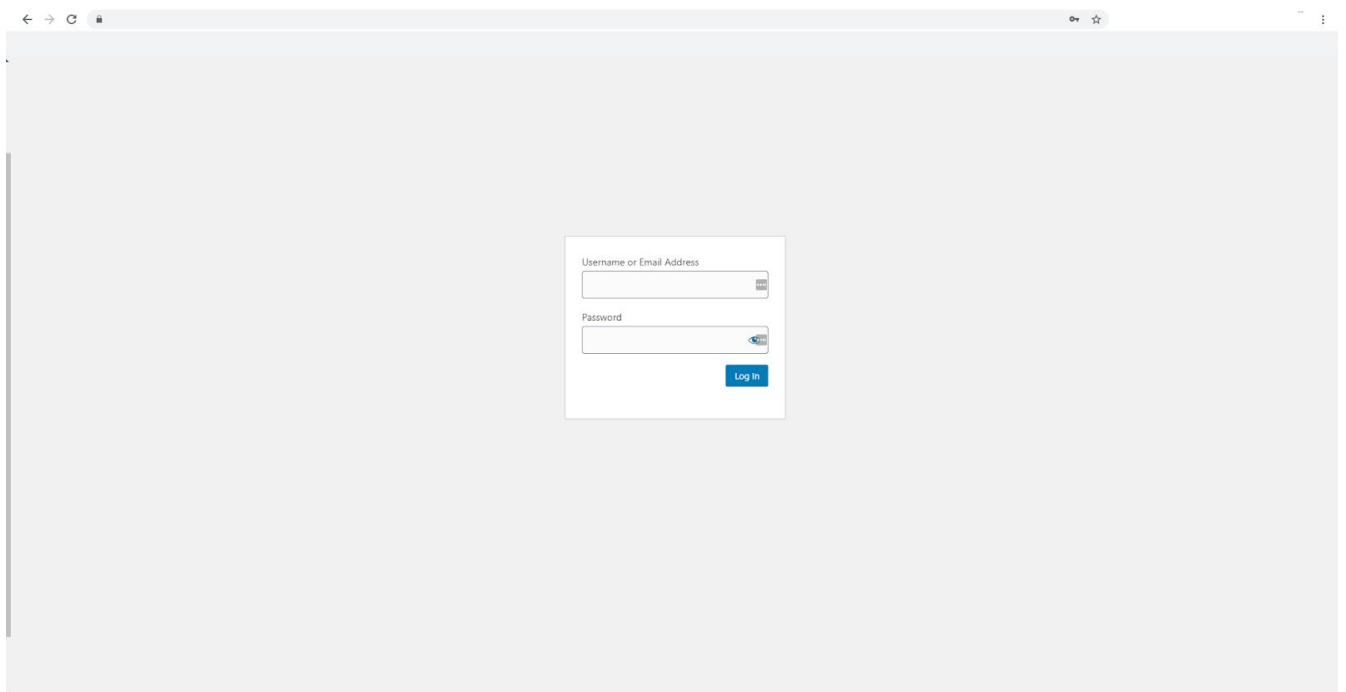

(ex: www.cherylaspencer.com/appname-login)

Admin credentials will be stored on the CPanel only accessible to the hosting owner.

The Admin Dashboard Plugin will be customizable by name, which will generate the URL

(ex. Name is 'Appname', URL is www.cherylaspencer.com/appname-login)

Create a login dialogue box to access the plugin/URL with a Username/email and a password:

The image shows a web browser window with a login form centered on a light gray background. The form is a white box with a thin border. It contains two text input fields. The first field is labeled 'Username or Email Address' and has a small 'show' button to its right. The second field is labeled 'Password' and has a small 'show' button to its right. Below the password field is a blue button with the text 'Log In' in white. The browser's address bar is visible at the top, showing a URL that starts with 'http://www.cherylaspencer.com/'.

When they login, they will be directed to the password protected URL/plugin
The page will look simply like this:
